 - ☐ A PDF copy of IRB approval is contained in the package.
 - ☐ A PDF document outlining the design of the experiment, including information on the selection and eligibility of participants is included.
 - ☐ A PDF copy of the instructions given to participants in both original language and an English translation is included.
- ☐ uses data generated via survey by the authors (in field or online)

7 Analyzing Data and Code Files

7.1 Potential Personal Identifiable Information (PII)

⚠ We found the following instances of potentially personally identifying information. This may be completely legitimate but might be worth checking. As a reminder, privacy legislation in many countries (e.g. GDPR in EU) prohibits the dissemination of personal identifiable information without prior (and documented) consent of individuals. If indeed you want to publish such information with your replication package, you should probably have obtained IRB approval for this - please check!

Summary:

- Data files with PII indicators: 0
- Variables flagged in data: 0
- Code files with PII references: 650
- PII references in code: 24150

7.1.2 File Paths Report

Generated on 2026-08-15T20:21:14.091

Warning: Our search on file path types is imperfect and incurs both type 1 and type 2 errors. We aim to strike a reasonable balance between both. The below table is therefore only indicative. Detailed listings can be found in the appendix to this report.

In this table we analyse all files which contain source code (not data and documentation), and we report the grand total of each type of filepath we encountered.

Please check and replace any `windows` filepaths with unix compliant paths, insofar as this is possible in your setup. (Notice that `STATA` allows `/` to be a filepath separator on a windows platform, hence this is a requirement for *all* `STATA` applications.)

7.2 Code description

The replication package contains a multi-step Stata/R/Fortran pipeline: multiple Stata do-files, including main files `master_synth.do`, `master.do`, and `produce_exhibits.do`; one R helper for Figure B9; and Fortran model code organized into 31 scenario folders.

☒ The replication package contains a “main” or “master” file(s) which calls all other auxiliary programs.

7.3 Computing Environment of the Replicator

- Nuvolos Cloud, Ubuntu 22.04.2 LTS, 16-core CPU, 64 GB RAM, 50 GB storage

- Stata/MP 19.5
- R 4.5.1

For Fortran model replication only:

- MacBook M2 Pro with MacOS Tahoe 26.5.1 with 16 GB RAM

8 Replication

- Downloaded code and data from dropbox.
- Opened Stata, changed directory to the root of the package and ran `synthetic_data/code/make_simulated_data.do` to regenerate the public dataset.
- As per Readme, ran `code/master_synth.do`.
- Ran `code/Figure_B9/cutoff_prefs_id_example_graph.R` as per Readme.
- Replicated locally (on MacOS) one single scenario (`1_baseline`) computed by the Model Code.
- After having checked that the generated results for the replicated scenario matched those computed by authors, the pre-computed results were used to proceed with the last step of the replication (`code/produce_exhibits.do`).
- Code ran to completion.

9 Findings

9.1 Data Preparation Code

Data preparation code ran without issues.

9.2 Tables and Figures

Due to the confidential nature of data, replication assessed the capacity of the code to produce results that match **qualitatively** those in the paper. Replicated output, marked with **yes*** in the table below, is generated from simulated data and cannot reproduce the results in the paper quantitatively.

9.3 In-Text Numbers

- ☒ There are in-text numbers and they are identified in the code

Authors included the script `code/descriptives/intext_numbers.do` to generate in-text numbers and correctly added citations for numbers drawn from external sources.

As the package relies on confidential data unavailable to the replication team, replication assessed the capacity of the code to produce results that match **qualitatively** those in the paper. Such replicated output is marked with **yes*** in the table below.

The version of the paper available in the current replication package, however, still misses one reference for the teachers' share of Wisconsin public employees.

10 Classification

- ☐ full reproduction
- ☐ full reproduction with minor issues
- ☒ partial reproduction (see above)
- ☐ not able to reproduce most or all of the results (reasons see above)

10.1 Reason for incomplete reproducibility

- ☐ None.
- ☐ **Discrepancy in output** (either figures or numbers in tables or text differ)
- ☐ **Bugs in code** that were fixable by the replicator (but should be fixed in the final deposit)
- ☐ **Code missing**, in particular if it prevented the replicator from completing the reproducibility check
 - ☐ **Data preparation code missing** should be checked if the code missing seems to be data preparation code
- ☐ **Code not functional** is more severe than a simple bug: it prevented the replicator from completing the reproducibility check
- ☐ **Software not available to replicator** may happen for a variety of reasons, but in particular (a) when the software is commercial, and the replicator does not have access to a licensed copy, or (b) the software is open-source, but a specific version required to conduct the reproducibility check is not available.
- ☐ **Insufficient time available to replicator** is applicable when (a) running the code would take weeks or more (b) running the code might take less time if sufficient compute resources were to be brought to bear, but no such resources can be accessed in a timely fashion (c) the replication package is very complex, and following all (manual and scripted) steps would take too long.
- ☐ **Data missing** is marked when data *should* be available, but was erroneously not provided, or is not accessible via the procedures described in the replication package
- ☒ **Data not available** is marked when data requires additional access steps, for instance purchase or application procedure.
- ☐ **Missing README** is marked if there is no README to guide the replicator, or the README is not in compliance with JPE requirements
