ID	20220349
Author	Biasi
Title	Equilibrium in the Market for Public School Teachers: District Wage Strategies and Teacher Comparative Advantage
Iteration	1

Some useful information up front:

- [JPE Data and Code Availability Policy](#)
- [Step by step guidance from Data Editor for Authors](#)
- [Template README](#)

2 Summary

In assessing compliance with our [Data and Code Availability Policy](#), our reproducibility team has identified the following issues, which we ask you to address:

1. We were able to run all exhibits of the package, which is a success.
2. We have a few required items to add to the readme, see below.
3. Your fortran code duplicates basically 31 times much of the same stuff. That's your choice, just pointing out the bloat here.
4. The fortran instructions are not comprehensible. You should add a dedicated section in the readme where you take one of those (baseline I guess) and explain line by line what this telling us. The top part seem to be parameter values. Are those read by the fortran program? Are those some kind of specification settings? The part under *Purpose* seems an ordered list, but item 6 is missing.
5. None of the in-text numbers are documented. I typically advise people to write a small program that would print those statements to screen - see if you can do something like that without too much effort, in the cases where it matters.

4 High-level Description of Research Project

This research project...

- ☒ uses observational data.
- ☒ uses *confidential* observational data.
- ☐ uses data generated via experiment or trial by the authors (in field or lab).
 - ☐ For lab experiments: The code to implement the experimental protocol (z-Tree, o-Tree etc) is included in the package.
 - ☐ A PDF copy of IRB approval is contained in the package.
 - ☐ A PDF document outlining the design of the experiment, including information on the selection and eligibility of participants is included.

- ☐ A PDF copy of the instructions given to participants in both original language and an English translation is included.
- ☐ uses data generated via survey by the authors (in field or online)

☐ The programs used to administer the survey (e.g. qualtrics survey file) are included.

☐ A PDF copy of IRB approval is contained in the package.

☐ A PDF of the original questionnaire(s) and information on the selection and eligibility of participants is included.
- ☐ is a simulation study: the data are generated by an algorithm.
- ☐ is a numerical illustration: no data are used but code is used to produce illustrative output (tables, figures)

5 Data description

For any data that cannot be provided as part of the replication package, please provide the following information as part of the README.

{REQUIRED} Please specify how long the data will be preserved in the restricted-access location.

{REQUIRED} Please provide affirmation of support for replication checks. – As per the [JPE policy](#), “In cases where data cannot be published in an openly accessible trusted data repository like the JPE dataverse, authors who have requested an exemption to publish them at the time of first submission must commit to preserving the data and code for a period of no less than five years following the publication of the paper. They should also provide reasonable assistance to requests for clarification and replication.”

{REQUIRED} Please provide a codebook for the data. – The codebook should at a minimum describe the variables obtained from the data source, in a manner that will let others verify that they have obtained a substantially similar dataset if successfully obtaining access to the data.

7 Analyzing Data and Code Files

7.1 Potential Personal Identifiable Information (PII)

△ We found the following instances of potentially personally identifying information. This may be completely legitimate but might be worth checking. As a reminder, privacy legislation in many countries (e.g. GDPR in EU) prohibits the dissemination of personal identifiable information without prior (and documented) consent of individuals. If indeed you want to publish such information with your replication package, you should probably have obtained IRB approval for this - please check!

Summary: - Data files with PII indicators: 159 - Variables flagged in data: 263 - Code files with PII references: 650 - PII references in code: 24150

7.1.2 File Paths Report

Generated on 2026-07-27T12:41:35.501

Warning: Our search on file path types is imperfect and incurs both type 1 and type 2 errors. We aim to strike a reasonable balance between both. The below table is therefore only indicative. Detailed listings can be found in the appendix to this report.

In this table we analyse all files which contain source code (not data and documentation), and we report the grand total of each type of filepath we encountered.

Please check and replace any `windows` filepaths with unix compliant paths, insofar as this is possible in your setup. (Notice that `STATA` allows `/` to be a filepath separator on a windows platform, hence this is a requirement for *all* `STATA` applications.)

7.1.4 Zero Size Files Report

We did not find any zero sized files.

7.1.5 Large Files Report

We did not find any files larger than 100MB.

7.2 Code description

The replication package contains a multi-step Stata/R/Fortran pipeline: multiple Stata do-files, including main files `master_synth.do`, `master.do`, and `produce_exhibits.do`; one R helper for Figure B9; and Fortran model code organized into 31 scenario folders.

☒ The replication package contains a "main" or "master" file(s) which calls all other auxiliary programs.

7.3 Computing Environment of the Replicator

- Nuvolos Cloud, Ubuntu 22.04.2 LTS, 16-core CPU, 64 GB RAM, 50 GB storage
- Stata/MP 19.5
- R 4.5.1

For Fortran model replication only:

- MacBook M2 Pro with MacOS Tahoe 26.5.1 with 16 GB RAM

8 Replication

- Downloaded code and data from dropbox.
- Opened Stata, changed directory to the root of the package and ran `synthetic_data/code/make_simulated_data.do` to regenerate the public dataset.
- As per Readme, ran `code/master_synth.do`. Several fixes needed to be applied, as described in the following points.
- Code initially failed due to missing packages `blindschemes` and `require` not recalled by authors. Packages were installed and code was relaunched.

```
. set scheme plotplain
scheme plotplain not found
r(111);
```

```
. reghdfe salary_r, a(district_code##year exp##masterup) resid
reghdfe requires the require package to maintain its dependencies; please install it:
- install from SSC
- install from GitHub
r(9);
```

- Ran `code/Figure_B9/cutoff_prefs_id_example_graph.R` as per Readme.
- Replicated locally (on MacOS) one single scenario (`1_baseline`) computed by the Model Code.

- After having checked that the generated results for the replicated scenario matched those computed by authors, the pre-computed results were used to proceed with the last step of the replication (`code/produce_exhibits.do`).
- Code ran to completion.

9 Findings

9.1 Missing Requirements

- ☐ Software Requirements
 - ☐ Stata packages
 - blindschemes
 - require

[REQUIRED] Please amend README to contain complete requirements.

You can copy the section above, amended if necessary.

9.2 Data Preparation Code

Data preparation code ran without issues after having installed required packages.

9.3 Tables and Figures

Due to the confidential nature of data, replication assessed the capacity of the code to produce results that match **qualitatively** those in the paper. Replicated output, marked with **yes*** in the table below, is generated from simulated data and cannot reproduce the results in the paper quantitatively.

10 Classification

- ☐ full reproduction
- ☐ full reproduction with minor issues
- ☒ partial reproduction (see above)
- ☐ not able to reproduce most or all of the results (reasons see above)

10.1 Reason for incomplete reproducibility

- ☐ None.
- ☐ **Discrepancy in output** (either figures or numbers in tables or text differ)
- ☐ **Bugs in code** that were fixable by the replicator (but should be fixed in the final deposit)
- ☒ **Code missing**, in particular if it prevented the replicator from completing the reproducibility check
 - ☐ **Data preparation code missing** should be checked if the code missing seems to be data preparation code
 - ☐ **Code not functional** is more severe than a simple bug: it prevented the replicator from completing the reproducibility check
 - ☐ **Software not available to replicator** may happen for a variety of reasons, but in particular (a) when the software is commercial, and the replicator does not have access to a licensed copy, or (b) the software is open-source, but a specific version required to conduct the reproducibility check is not available.
 - ☐ **Insufficient time available to replicator** is applicable when (a) running the code would take weeks or more (b) running the code might take less time if sufficient compute resources were to be brought to bear, but no such resources can be accessed in a timely fashion (c) the replication package is very complex, and following all (manual and scripted) steps would take too long.
 - ☐ **Data missing** is marked when data *should* be available, but was erroneously not provided, or is not accessible via the procedures described in the replication package
 - ☒ **Data not available** is marked when data requires additional access steps, for instance purchase or application procedure.
 - ☐ **Missing README** is marked if there is no README to guide the replicator, or the README is not in compliance with JPE requirements
